

Transform your systems and increase speed-to-market

Nexon's DevOps consulting and advisory services build a strong, shared vision and culture between development and operations, so you can go to market sooner, modernise your application infrastructure, and innovate with speed and ease.

Removing the friction between development and operations

By transforming your systems, automating manual workflows, and equipping you with best-practice cloud delivery processes, our DevOps services empower your organisation to deliver better products faster while accelerating towards your digital future.

Our DevOps experts work to remove the 'wall of confusion' between development, operations and other IT stakeholders that so often leads to inefficiencies, ineffective communication, and costly delays in taking products to market.

As a result of our streamlined, automated approach and modern technology, we'll help you boost your speed of delivery, improve organisational and software performance, support innovation, and enhance staff morale through a more seamlessly integrated environment.

Nexon's specialist DevOps consulting and advisory services allow you to:

- Increase speed-to-market and deliver better applications, faster
- Be equipped for a digital future with modernised technology
- Automate processes for improved efficiency and productivity
- Move from a ticket-based approach to an Agile, collaborative culture
- Accelerate your migration to the cloud or enhance existing cloud delivery
- Increase the stability of vital IT services and platforms
- Improve staff morale and reduce burnout by minimising complexity

Improving speed, innovation, safety and confidence through DevOps

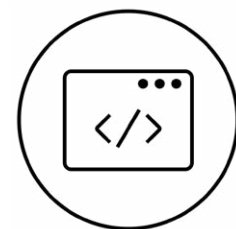

While most organisations take an engineering first approach to DevOps, moving to a whole of IT DevOps culture—one led by measurements and data-driven actions—can result in significant, organisation-wide benefits.

A study revealed that compared to ‘low performers’ (those with a zero or minimal DevOps environment), ‘elite performers’ (those who took a whole of IT approach to DevOps) achieved:

6570 x

faster lead time from commit to deploy & faster time to recover from incidents

973 x

more frequent code deployments

3 x

lower change failure rate

Cut the time from concept to delivery

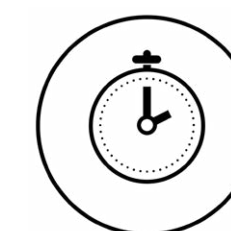

When speed to market matters, you need the ability to bring high-quality software to your end customers as quickly and efficiently as possible. Nexon's DevOps consulting and advisory services focus on empowering you to deliver faster while maintaining stability and quality.

By increasing automation across the software delivery lifecycle, cutting internal wait times, and minimising complexity, our expert consultants help you to develop applications with a level of speed and simplicity that puts your business ahead.

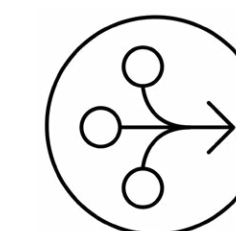

What's more, our streamlined, end-to-end approach enables our clients to recover faster from incidents, reducing disruption and costly delays.

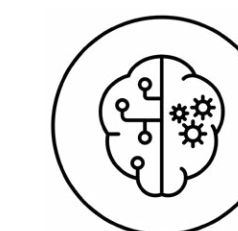

Automate manual processes to increase speed and efficiency

Reduce internal wait times for IT operations services

Simplify complex, cumbersome tasks to enable faster response time

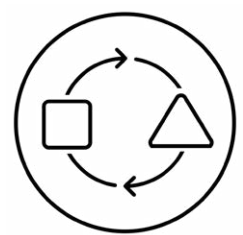

Integrate development and operations for a more streamlined approach

Modernise your application architecture

A modernised, cloud-based application architecture is the driving force behind digital transformation. Whether you're new to the cloud and want to leverage best-practice delivery automations or are struggling to keep up with changes in your cloud system, our DevOps solutions are designed to help you modernise your applications and platforms.

With the support of our DevOps consultants, you can embark on your journey to designing and implementing your IT transformation strategy, with an up-to-date delivery system and efficient automated processes.

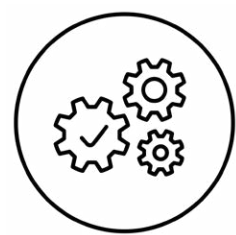

Empowered with a cutting-edge application architecture, your organisation can develop and deliver products with ease, while enjoying the agility and flexibility to embrace a digital-focused future.

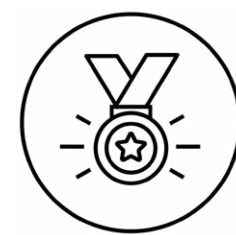

Transform your systems and modernise your entire IT architecture

Migrate to the cloud or modernise existing cloud delivery

Streamline processes across the lifecycle through powerful automation

Put your organisation ahead and become an industry leader

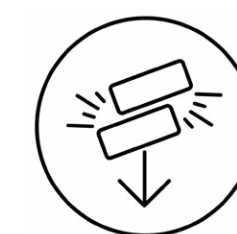

Boost innovation and competitive advantage

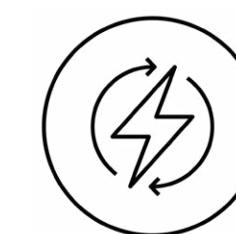

The ability to innovate quickly and effectively—and then deliver on those innovations fast—is crucial for gaining and maintaining a competitive edge. And with modernised applications to facilitate streamlined development and operations, your organisation will be equipped to dominate in the digital future.

By automating and integrating the processes between software development and IT teams, our specialist DevOps services make it easier for your team members to innovate, collaborate and communicate with speed and clarity.

As a result, your organisation can keep up with—and ultimately move ahead of—your competitors who are using cloud and DevOps to deliver better applications faster.

Reduce friction and obstacles between development and operations teams

Move from a reactive ticket-based culture to a collaborative agile culture

Take away the complexity involved in bringing innovative products to market

Empower your staff

Manual processes and a reliance on IT tickets impact more than just business productivity; the lengthy tasks and complex processes inherent in this environment can cause dissatisfaction and even burnout among your team members.

By empowering your staff with modern technology, automated processes, and a streamlined way to develop and deliver, moving to a DevOps environment can boost morale, increase job satisfaction, and create a happier, motivated team that's equipped to do more with ease.

Creating a self-service operating model removes your highly-skilled team members from performing repetitive, lower-value work, freeing them up to focus on more innovative initiatives and continuous improvement. Self-service operating models will also help standardise your architectural approaches, removing complexity and lowering technical debt.

The introduction of best-practice tools and cutting-edge applications can help you to increase skilled staff retention rates while upskilling existing team members, increasing engagement and positioning your organisation as a sought-after employer.

Reduce staff burnout and increase job satisfaction

Use best-practice tools and modern technology to boost engagement

Embrace self-service to standardise and elevate staff to higher-value tasks

Upskill staff members and improve retention rates

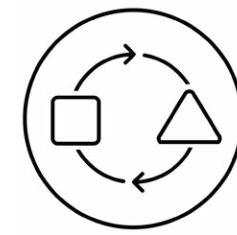

A faster, simpler, more streamlined approach to product delivery

Increase your speed-to-market

- Use automation to improve the speed and efficiency of product development and delivery.
- Cut internal wait times by moving away from a ticket-based approach and embracing self-service.

Transform your IT systems

- Modernise your entire application architecture and introduce cutting-edge best-practice tools.
- Move ahead in your digital transformation journey with state-of-the-art platforms and cloud delivery processes.

Strengthen your competitive edge

- Stay ahead of your competitors by delivering better, more innovative products in shorter timeframes.
- Leverage Nexon's end-to-end solutions and consultative approach to develop an industry-leading position.

Increase staff and customer satisfaction

- Reduce employee burnout through self-service, easy-to-use, time-saving automation.
- Improve delivery processes to ensure greater satisfaction among internal teams and clients.

Our DevOps specialisations

1 DevOps Assessments

- Measure your current performance and put a roadmap in place to achieve your goals
- Align with your business strategy
- Optimise in the right place with Value Stream Mapping

2 Continuous Delivery

- Automate and optimise software delivery
- Design and execute your migration to a modern delivery platform Test early, test often with our shift-left testing and security integration
- Secure and monitor your Software Supply Chain

3 Infrastructure as Code

- Leverage Secure Automated Cloud Landing Zones
- Benefit from public and private cloud management with Infrastructure as Code
- Move away from tickets and empower the consumer with Self-Service IT Automation
- Automate your governance and compliance with Policy as Code

4 DevOps Team Transformations

- Design your operating models correctly with a focus on Team Topologies
- Scale DevOps beyond the first team by creating a Platform as a Product
- Focus on Developer 'Day 1' Productivity to ensure ROI optimisation
- Stay connected with your team and your systems through our ChatOps approach

5 Application Modernisation

- Unlock development and delivery agility by moving to containers
- Design applications for modern cloud and delivery practices using Cloud Native Development
- Modernise your .Net Applications and move from .Net Framework to .Net Core

6 Reporting and Analytics

- Create dashboards and visualisations, and report on the 4 Key DevOps Metrics for success
- Help customers understand the data insights and learn how your team can change to improve their metrics

The Nexon advantage

Nexon Asia Pacific (Nexon) is an award-winning digital consulting and managed services partner for mid-market and government organisations across Australia. We have a uniquely broad suite of solutions to service clients who require end-to-end capabilities coupled with specialist expertise in security, cloud and digital solutions.

Our advanced solutions help clients to solve problems, address frictions and accelerate growth. Committed to the highest standards of responsiveness, competency and transparency, Nexon is built on a unique client care model that is fuelled by continuous feedback. With over 400 staff, we employ some of the country's most experienced consultants and empower teams to make decisions that accelerate change for client organisations.

As a certified and accredited local and state government provider, CREST and ISO-certified, Nexon partners with world-class technology vendors to deliver innovative solutions and service excellence.

We help our clients move from a position of overwhelm to empowerment, looking forward to a more agile and digital future.
