

Nexon Cloud Solutions

Scale your business now and into the future with end to end cloud services and dynamic infrastructure that adapts with you as you grow.

When it comes to digital transformation in the modern workplace, how can you navigate your cloud strategy into the future?

As cloud environments become more complex, it's a real challenge to identify how to migrate to the cloud and to have the right skill sets to connect legacy architecture with cloud-hosted applications, while also maintaining security, reducing risk and achieving compliance.

According to Australian Cloud Market Study 2019, over 77 percent of Australian organisations have adopted more than one cloud platform. In fact, almost half are using more than four cloud platforms. But choosing the right path forward can be particularly challenging.

Leveraging and operating multiple cloud solutions quickly becomes highly complex, especially in a rapidly changing landscape.

For businesses that are scaling up, it's imperative they are able to overcome these challenges while also managing the change of their workloads across cloud environments, all the while retaining control and keeping their technology budget in check.

How can business leaders simplify their multi-cloud approach while gaining scalable and cost-effective business benefits?

Nexon Cloud Solutions offers the right mix of services and infrastructure to meet users' expectations, now and in the future, in a fully hybrid cloud model.

With Nexon Cloud Solutions, business leaders can keep greater control over their technology budget because we provide end to end consultancy, advisory and managed support services. With Nexon's innovative and dynamic hybrid cloud architecture and service offering Agile Business Cloud, organisations can access efficiency, agility and security while benefitting from public and/or private clouds.

Achieve more with your technology budget with our end to end Cloud services

We provide end-to-end consultancy and support, making it easier to migrate, secure, protect, monitor, manage, support and govern business critical data and applications.

We give you the flexibility to adapt the cloud to your business requirements and we guide you through the entire process at a pace that works for you.

Consult

We're leading experts in custom-built cloud solutions and provide consultancy and advisory to guide you through the entire process at a pace that works for you.
