

# 11 alarming facts about cybersecurity you need to know

Cybercrime is the scourge of Australian businesses and organisations of all sizes. From traditional spam, viruses and malware, companies now have to deal with a wide range of threats including phishing, water holing, man-in-the-middle attacks, ransomware and the list goes on.

How prepared is your organisation? We've developed this handy infographic to highlight the nature and impacts of threats you now face.

Percentage of Australian organisations that have suffered one or more breaches in the past 12 months due to external cyberattacks<sup>7</sup>

Time it takes to resolve a cyberattack if the attacker was a malicious insider, employee or contractor<sup>8</sup>

Top 4 categories of personal data extracted from Australian organisations due to a data breach for 2019<sup>9</sup>

1. Contact information
2. Financial details
3. Identity information
4. Health information

The average number of Australian IP addresses in May 2020 that were vulnerable to DDoS attacks<sup>10</sup>

Three most common type of cyberattacks on Australian businesses in 2018<sup>11</sup>

1. Phishing
2. Ransomware
3. Process weakness
