

NEXON MANAGED SECURITY SERVICES

Securing tomorrow's workplace with an integrated security framework.

Forming part of Nexon's integrated cloud platform, Nexon managed security services is designed to ensure end-to-end security and availability, it embed a foundation of security solutions that are both scalable and manageable for your organisation. It provides you the capability to continuously adapt risk and trust profiles in response to threats.

Modern businesses are adapting to the environment for survival. From pivoting to new operating models, developing new products and services, to creating tomorrow's workplace, organisations are attempting to be ahead of competition. When protecting corporate and customers' data from cyber attackers, businesses need to be abreast as well amidst the accelerated scale, complexity and impact of cyber security.

With more organisations looking beyond their current cyber security posture and adopting new security measures, Nexon provides organisations with the capability to continuously adapt to emerging risks through its managed security services portfolio. Nexon security services framework assures data confidentiality and integrity as well as the availability of applications by detecting, responding and remediating threats across different vectors of which cyber attackers could gain access.

BENEFITS FROM USING NEXON MANAGED SECURITY SERVICES

You can't stop what you don't know. Visibility into user behaviour, applications, web traffic, threats and data patterns will give you the intelligence to make informed decisions with standard and customisable reporting.

Use our skills and expertise. Nexon provides you with industry's best practices in security policy configuration that will put you ahead of the game.

Signature-based systems no longer work. Continuous cloud-based threat intelligence at the perimeter and end-points to protect you from new and unknown threats.

Have peace of mind. Benefit from the continuous upgrades and updates, 24/7 expert management and monitoring by Nexon.

NEXON MANAGED SECURITY SERVICES COMPONENTS

Nexon managed security services are capable of protecting organisations from both known and unknown threats and attacks. The services are provisioned based on an integrated security platform that provides a consolidated view of network, end-points and email activities with controls that safely enable the use of all applications.

The solution brings together multiple security disciplines, features and functions to ensure that your organisation has the necessary foundation and tools to control the evolving and proliferating threats.

- Next-generation firewall
- Web content filtering
- Advanced threat prevention
- Secure remote access
- Endpoint protection and management
- Email security and spam filtering
- Management and reporting

NEXON MANAGED SECURITY SERVICES COMPONENTS

NEXT GENERATION FIREWALL (PERIMETER SECURITY)

- Providing visibility into applications, users and content for informed decisions.
- Perimeter control based on users, groups and applications, not only IP addresses.
- Web content filtering enabling granular control over web browsing activity, in addition to safe application enablement policies.
- Flexible policy-based control tailored to meet your organisational requirements.

ADVANCED THREAT PREVENTION

- A fully integrated real-time threat prevention system that protects your information, together with policy-based application visibility and control that the perimeter and end-point services deliver.
- Identifies unknown malware, zero-day exploits, and Advanced Persistent Threats (APTs) through dynamic analysis in a scalable cloud-based, virtual environment to ensure accurate, safe and scalable malware analysis.
- Allows the blocking of unwanted applications, and scanning allowed applications for malware.

- Protects your network from unintentional download of virus or malware known as "drive-by" download.

SECURE REMOTE ACCESS

- Secure communications, data and information transfer between sites, people wherever you are.
 - Access to corporate network, data and resources when on the move or remote.
 - Accessing data and information on Internet-connected mobile devices.

ENDPOINT SECURITY

- Provides anti-virus and malware, application blocking and control, web filtering and removable media devices scanning.
- Protects data and control access with an integrated threat defence.
- Reduce operational complexity through an integrated architecture with automation efficiency and protection.

EMAIL SECURITY AND SPAM FILTERING

- Cloud-based email security and spam filtering before they can even reach your network.

- Blocking unacceptable or dangerous content from infiltrating your email systems.
- Secure inbound and outbound email.
- Protect against viruses, spam, phishing attacks, Denial of Service attacks and zero-day attacks.
- Prevent data leakages for corporate security purposes.
- Reduce the time and resources needed to update and monitor security levels.

MANAGEMENT AND REPORTING

- Centrally managing device configuration, security policies deployment, forensic analysis, and reports generation across your entire network.
- Visibility: A view into the applications, users and content traversing your network.
- Logging: Quickly view log activities using dynamic log filtering to define the filter criteria.
- Reporting: Predefined reports can be used as-is, customised, or grouped together as one report to suit specific requirements.

WHY NEXON MANAGED SECURITY SERVICES?

We take the complexity out for you with a simple, integrated and automated approach.

ALL-IN-ONE

We bring together the essential security functions, including perimeter, endpoint and email protection under one roof so that it is easier for you.

CONTROL, ENABLE, AND PROTECT

A fully integrated solution that safely enables your use of applications, gives you complete visibility and control at the same time.

SIMPLE, FLEXIBLE PRICING MODEL

Simple, low-risk pricing model that is based on per user per month and includes continuous protection and technology upgrades.

SERVICE TAILORED TO YOUR NEEDS

Its integration with Nexon's network infrastructure, compute resources and services can be tailored to needs.

REAL-TIME SERVICE VIEWS AND ACCESS TO SECURITY EXPERTS

Web portals that give you access to real-time, on-demand access to the latest service information and expertise.

BUILDING THE FOUNDATION

Sound security foundation that allows you to confidently pursue new initiatives such as cloud and mobility.
